

**RON FRANCIS**  
*Wiring*

**AH-26  
Alternator Wiring Kit  
for Ford 6G  
Alternators**

**ALWAYS follow the wording on the wires themselves.**

You will hookup the large **RED** wire to the 'bat' terminal of the alternator and run the other end to the starter solenoid or wherever your positive battery cable attaches to. Install the sleeve & ring and connect it to the battery cable post of the starter solenoid or wherever your positive battery cable attaches to.

**IMPORTANT: Installing the sleeve and ring terminal is an important connection.**

Plug the black connector into the alternator. The **BROWN** wire marked ALT FEED->ACC is run to an accessory hot source in your wiring system (hot with the key on).
