Wiring

CT-45

Convertible Top Wire

This kit includes the 3 feed wires for most common power tops that are heavy enough to carry the load of the motor. One is a feed wire to the convertible top switch. The remaining two wires run from the switch to the motor.

NOTE: If this is a new pump and system, follow the manufacturer's instructions using our wires. If this is a replacement for a factory application follow a diagram if that particular system or duplicate the system using the old wiring as a guide.

Ron Francis Wiring does not have original wiring schematics that pertain to this circuit.
