

## Mustang Oxygen Sensor Harness and Extended Mustang Oxygen Sensor Harness Installation Instructions

These Instructions Cover the Following Part Numbers:

FH-030	1994-95 Ford Mustang Replacement Oxygen Sensor Harness – All Trans
FH-030E	1994-95 Extended Ford Mustang Replacement Oxygen Sensor Harness – All Trans

**Note:** this harness does not include the alternator or battery connections normally found in the factory harness. Installer will have to either incorporate this harness into the original harness or unplug the original harness and leave installed.

## Installation Instructions:

- 1) Disconnect battery
- 2) Raise vehicle and secure appropriately.
- 3) Begin removing the existing oxygen sensor harness by disconnecting both oxygen sensor connectors and the oil level connector at the oil pan. Note how harness is routed. Complete removal of the oxygen sensor harness by disconnecting the round 8 gang connector.
- 4) Install new oxygen sensor harness by connecting the 8 gang connector and route harness down to the oxygen sensors.

If you have purchased the extended version of this harness there is an additional 24 inches built into this harness to allow for the installation of long tube headers.

Connect the oxygen sensor connectors noting that shorter leg of harness is the left oxygen sensor (driver side) and the longer leg of harness is the right oxygen sensor (passenger side). Be sure to connect oil level sensor connector.

Complete installation by confirming harness is routed away from exhaust and any moving parts.
