## PT-22
22 Gang Bulkhead
Connector Kit

Terminal installation instructions:

1)   Strip wire roughly 1/4 inch.

2)   Install green seal making sure not to fray any wire stands:

3)   Crimp terminal onto wire, crimping the wire strand
        area first. Crimp the wire seal second. If you do not
        have the proper crimp tool, use pliers to fold the flaps
        onto the wire. The cable seal flaps only need enough
        crimp to provide friction to keep the seal in place:

4)   Install completed wires/terminals into connector sockets.
        Both terminals are compatible with both connector housings.
        Once all wires/terminals are installed close secondary lock.
